

The Medellín Protocol: A Research-Backed 6-Month Transformation Plan from \$0 to \$10K/Month

TL;DR

- **The single highest-leverage move in the next 30 days is to accelerate your existing appointment-setter role into a closer seat on a high-ticket offer (\$3K–\$20K AOV), because that path realistically pays \$8K–\$20K/month with the skills you already have — while you build an AI-powered service business in parallel as your second leg.** Independent benchmarks (Belkins 2025; LevelUp Leads' analysis of Smartlead's 14.3B-email dataset, Jan 2021–Apr 2025; Instantly Benchmark Report 2025) show ~3 replies per 100 cold emails as the *cross-industry average*, with top quartile exceeding 10%; a disciplined operator hitting 10–20% reply-to-meeting and 20–30% meeting-to-close can mathematically reach \$10K/month within 90–120 days.
- **Mindset and consistency are not character problems; they are environment, identity, and dopamine problems** — solvable with three research-validated levers: identity-based habits (Clear/Bem/Dweck), context redesign (Wood & Rünger, "Psychology of Habit," *Annual Review of Psychology* 67:289–314, 2016 — finding originally from Wood, Quinn & Kashy, *JPSP* 83:1281–1297, 2002: "Fully 43 percent of the time, our actions are habitual, performed without conscious thought"), [Goodreads](#) [Shortform](#) and implementation intentions (Gollwitzer & Sheeran, "Implementation intentions and goal achievement: A meta-analysis of effects and processes," *Advances in Experimental Social Psychology* 38:69–119, 2006: "Findings from 94 independent tests showed that implementation intentions had a positive effect of medium-to-large magnitude ($d=.65$) on goal attainment"). [DSpace](#) [ResearchGate](#)
- **Medellín is realistic on \$10K/month:** a high-end El Poblado one-bedroom with views runs \$1,000–\$1,500/month furnished; a new KTM 390 Duke G3 in Colombia is COP \$30.99M (~\$7,600 USD) at official dealers like KTM Llanogrande. The lifestyle you described costs roughly \$2,500–\$3,500/month all-in, leaving 60–70% of your target income for savings, dating, and freedom.

KEY FINDINGS

1. **Your real bottleneck is not motivation — it's behavioral architecture.** Wood &

Rünger (*Annual Review of Psychology* 67, 2016) APA and the underlying Wood, Quinn & Kashy diary studies (*JPSP* 83:1281–1297, 2002) document that ~43% of daily action is automatic context-cued behavior. Korean Studies Institute Willpower-based plans fail predictably; environment-and-identity-based plans don't.

2. **The science on belief change is clearer than self-help culture suggests.** Cognitive restructuring (Beck), self-affirmation (Cohen & Sherman, *Annual Review of Psychology* 65:333–371, 2014), and identity-based habit work (Clear, drawing on Bem's self-perception theory, *Adv Exp Soc Psych* 6:1–62, 1972) have measurable effect sizes; vague "manifestation" does not.
 3. **Reality Transurfing's core insight — that internal state shifts external outcomes — has a legitimate scientific translation:** attention (RAS/salience network), prediction (Bayesian brain), behavior (Wood/Fogg), and identity (Bem/Clear). The pseudoscientific "space of variations" framing is unnecessary; the mechanisms are robust.
 4. **You have three viable income paths**, in order of speed-to-\$10K: (A) move from setter to high-ticket closer on a coaching/consulting offer, (B) sell AI services to SMBs using your sales skill as the wedge, (C) productize sales training with AI tooling. Pursue A as primary, B as secondary, C as the year-2 endgame.
 5. **The KTM Duke 390 and Medellín apartment are not "manifestation" goals — they are budget line items.** Print them in dollars and dates and they stop being fantasies.
-

1. IDENTITY & BELIEF REWIRING

How beliefs actually form and change

Beliefs are encoded as predictive priors in cortical circuits and emotionally weighted via the amygdala/insula. They change through three mechanisms supported by primary research:

- **Self-perception (Bem, *Adv Exp Soc Psych* 6:1–62, 1972):** humans infer beliefs about themselves from observed behavior. Repeated action → identity inference → reinforced belief. This is why James Clear's identity-based habits work: *"Every action you take is a vote for the type of person you wish to become."*
- **Cognitive restructuring (Beck; meta-analysis Hollon et al., [PMC10440210](#)):** identifying automatic thoughts, testing evidence, and generating balanced alternatives produces durable belief change. Effect sizes for CBT cognitive restructuring on depression and anxiety are medium-to-large across thousands of trials.
- **Self-affirmation (Cohen & Sherman, "The Psychology of Change: Self-Affirmation**

and Social Psychological Intervention," *Annual Review of Psychology* 65:333–371, 2014): brief writing about core values reduces defensive reactions to threat, expands behavioral flexibility, and the effects compound recursively over months/years.

Limiting beliefs likely active in you right now

Based on the profile of "just quit job, \$0 income, sales skills, mindset-and-consistency bottleneck," these are statistically the active scripts:

1. *"I should already be further along."* (Counterfactual rumination — fuels shame, kills outreach volume.)
2. *"If I don't make money fast, I made a mistake quitting."* (Sunk-cost framing — produces frantic, low-quality work.)
3. *"I'm not the type of person who sticks to things."* (Identity statement masked as observation. The most dangerous belief on the list.)
4. *"People can tell I don't have it figured out."* (Imposter projection — destroys sales tonality on calls.)
5. *"Wealth/success is for other people."* (Class/origin script — fuels self-sabotage near breakthroughs.)

The exercises (specific, daily/weekly, tailored to inconsistency)

Daily (~12 minutes total):

- **Identity Declaration, 60 seconds, immediately after morning sunlight** (see §2). Read aloud, in present tense, three identity statements: *"I am a closer. I am consistent. I do hard things daily."* This is not generic "affirmations" — and that distinction matters, because **Wood, Perunovic & Lee, "Positive Self-Statements: Power for Some, Peril for Others," *Psychological Science* 20(7):860–866, 2009** found *"repeating positive self-statements may benefit certain people, but backfire for the very people who 'need' them the most."* [Sage Journals](#) The fix: tie statements to behaviors you are *about to perform*, so Bem-style self-inference confirms them.
- **Two-Column Thought Record, 5 minutes, mid-morning before outreach.** Left column: automatic thought ("No one will reply today"). Right column: balanced alternative with evidence ("Last week 4 of 80 emails replied; the Instantly 2025 platform-wide benchmark across billions of interactions is 3.43% average reply, with top performers exceeding 10% — my 5% is above benchmark"). This is core Beck CBT.
- **Evening Identity Audit, 3 minutes:** "What did I do today that the closer I'm becoming would have done? What did I do that the old version did?" No judgment, just

observation. This activates self-perception theory: you're cataloging votes for the new identity.

Weekly (Sunday, 30 minutes):

- **Values affirmation writing (Cohen & Sherman 2014 protocol):** 10 minutes writing about one core value (e.g., "freedom" or "becoming the man my future partner deserves") and why it matters.
- **Limiting belief downward arrow:** pick one self-defeating thought from the week. Keep asking "and what would that mean about me?" until you hit the core belief. Then write three pieces of evidence against it. This is the clinical downward-arrow technique used in CT.

Why this works for a high-inconsistency profile

Inconsistency is almost always a mismatch between identity and action. You are not "lazy" — you have an old identity ("guy still figuring it out") that is being asked to perform new identity behaviors ("disciplined closer"). The brain resolves the dissonance by either (a) the old identity winning, you skip the work; or (b) the new identity winning, you do the work and feel like yourself. The exercises above are designed to make (b) the path of least resistance.

2. SUBCONSCIOUS CONDITIONING SYSTEM

What works, what's placebo

- **Works (with citations):**
 - *Mental imagery / motor imagery:* Pearson, "The human imagination: the cognitive neuroscience of visual mental imagery," *Nature Reviews Neuroscience* 20:624–634, 2019 [Nature](#) — overlapping neural circuitry with perception; motor imagery activates the same motor cortex regions as physical execution.
 - *Repetition with emotional encoding* (Hebbian learning, neuromodulator-tagged consolidation).
 - *Exposure:* the most evidence-backed intervention in clinical psychology.
 - *Implementation intentions:* Gollwitzer & Sheeran, *Advances in Experimental Social Psychology* 38:69–119, 2006 — 94 studies, $d = 0.65$. [DSpace](#)
- **Mostly placebo or unclear:**
 - Subliminal audio while sleeping (no robust evidence).

- Generic positive affirmations without identity-relevance — Wood, Perunovic & Lee (*Psychological Science* 2009) explicitly documented backfire effects for low self-esteem.
- “Manifestation” without behavior (Dispenza/Zeland framing). The mechanisms they describe (attention, expectancy, identity) are real; the quantum-mystical packaging is not.

The protocol that draws on all of this

MORNING (75 minutes, 6:00–7:15 AM)

Time	Action	Mechanism
6:00	Wake, drink 500 ml water with sea salt	Restored osmotic balance for catecholamine release
6:05–6:15	Outside, 10 min minimum, no sunglasses, eyes toward (not at) the sun	Huberman protocol (Huberman Lab newsletter, “Using Light for Health”): sets cortisol pulse and melatonin timer ~16 h later. He has called morning sunlight viewing one of the top five actions supporting mental and physical health. Huberman Lab
6:15–6:20	Identity declaration + day’s #1 outcome read aloud	Bem self-perception priming
6:20–6:30	Cold shower, 2–3 min	Huberman cites research showing dopamine, norepinephrine and epinephrine “as much as 150% above baseline lasting as long as 2–4 hours” HubSpot
6:30–6:50	Visualization + sales script rehearsal, out loud, standing, with full physiology	Motor imagery (Pearson 2019) + interoceptive rehearsal. You’re a salesperson — use that skill on yourself before you use it on prospects.
6:50–7:15	Movement (push-ups + walk, or gym)	BDNF release; cardiovascular priming for the prefrontal cortex

NIGHT (45 minutes, 9:30–10:15 PM)

Time	Action	Mechanism
9:30	Phone in another room; dim all overhead lights	Avoid late-light dopamine suppression Huberman documents
9:35– 9:45	Evening identity audit (§1) + tomorrow's three implementation intentions written	"If it is 9:00 AM, then I sit down and send 30 cold emails before I check anything else." Gollwitzer & Sheeran 2006, $d=0.65$. DSpace
9:45– 10:00	Five-sense visualization of Medellín apartment + KTM ride + healthy partner — felt, not just seen	Emotional-anchored imagery; activates the same circuits as the real thing (Pearson 2019)
10:00– 10:15	Read fiction or a focused book (paper)	Wind-down without screen blue light

How to "sell yourself" on your new identity

You already have the most powerful skill for this work: you can run a sales script. **Treat yourself as your highest-priority prospect.** Every morning, you are objection-handling your own resistance:

- *Prospect (you):* "I don't feel like making calls today."
- *Closer (you):* "What would it cost you in 90 days if you took today off? What does the version of you in the Medellín apartment do right now?"

Write this dialogue once. Rehearse it daily. This is the most underused application of sales skill in the personal-development literature.

3. ATTENTION & PERCEPTION CONTROL

The neuroscience (clean version)

The **reticular activating system (RAS)** is a brainstem network that regulates arousal and gates sensory information to cortex. It does **not** "know your goals" or "filter for what you focus on" — that's a self-help misreading documented in the Neuroscience School 2025 critique ("Instead of repeating the Reticular Activating System myth, say: when you set a meaningful intention, your brain's salience network starts prioritizing emotionally relevant information"). [Neuroscienceschool](#) The actual mechanism is split across:

- **Salience network** (anterior insula + dorsal anterior cingulate): tags incoming stimuli as relevant.
- **Frontoparietal attention network**: top-down focuses on goal-relevant stimuli.
- **Default mode network**: runs internal simulations when nothing external demands focus.
- **Predictive coding (Bayesian brain, Clark/Friston)**: the cortex constantly generates predictions and updates them based on prediction errors. What you expect to see, you literally see faster and more vividly.

The combined practical truth: **what you repeatedly attend to, you start to perceive more of**. Set the prior, the perception follows. This is the legitimate science behind Reality Transurfing's "internal state changes outcomes" — minus the quantum mysticism.

Daily practices that retrain attention

- **Three-target morning brief, 2 minutes**: written on a notecard you keep on your desk. *Income opportunities. Connection opportunities. Learning opportunities.* Re-read at 9 AM, 1 PM, 5 PM. This explicitly tunes your salience network's priors.
- **Opportunity journal, 90 seconds before bed**: write the three opportunities you noticed today that you would have missed a month ago. Without this consolidation step, the priors degrade.
- **Phone restriction protocol**: news apps deleted; social only on desktop, time-boxed. Algorithmic feeds are designed to make threat, drama, and other people's lives more salient than your own opportunities. You cannot retrain attention while feeding it adversarial inputs for hours a day.

How to perceive income/AI opportunities when you have \$0

Constraint: you cannot "see" what you cannot frame. Three concrete frames:

1. **Every business problem you hear is a potential close** ("My setter quit"; "I'm drowning in DMs"; "We can't keep up with follow-ups"). Carry a notebook for one week and write down every operational complaint you overhear or see online. By day 7 you will have 20+ specific service offers you could pitch tomorrow.
2. **Every AI tool you try should be evaluated as a sellable service**, not a personal toy. n8n, Make.com, Vapi, Retell, Instantly, Clay, GoHighLevel — each is a wedge into a \$1,500–\$5,000/month retainer (see §5).
3. **Every person in your existing network is a warm introduction**. Liam Ottley's documented public playbook (x.com/liamottley_, post 1701195864583393330) starts not with cold outreach but with free builds for your warm circle. His example: "Lead

Source: Family (my uncle). Industry: Local Plumbing. Timeline: 4 days." This produces testimonials that produce paid clients.

4. BEHAVIOR & EXECUTION LAYER

Keystone habits

A keystone habit is one whose execution disproportionately produces other good behaviors. For your profile, the two keystone habits are:

1. **Morning sunlight + cold shower + 30 cold outreaches before any input consumption.** Doing this one chained block daily collapses most of your other consistency problems because it makes the rest of the day a continuation of an already-won morning.
2. **The 5 PM "tomorrow setup" ritual** (10 minutes): inbox to zero of action items, tomorrow's three outcomes written, tools open in tabs and saved, water bottle filled. The night-before setup is the single highest-leverage 10 minutes in the workday.

Environment design (Wood applied)

"Once you form a habit, it takes willpower to inhibit the triggered response. If you don't have the energy to override the response, you tend to repeat what you've done in the past"

Duke Today (Wendy Wood, Duke 2007). Your environment is currently cuing your old behavior. Fix:

- **Workspace, not bedspace.** A dedicated desk with sales-only function. Bed is for sleep.
- **One screen, one task.** Close every tab not relevant to the current action. The friction of opening tabs is your friend.
- **Phone in a drawer in another room** during outreach blocks.
- **Trigger objects in line of sight:** a printed picture of the apartment in Medellín and the Duke 390 above your monitor. Not for "manifestation" — for salience priming and identity reminders.
- **Tools that reduce friction:** GoHighLevel snapshot, Instantly with warmed inboxes ready, scripts on a second monitor.

Anti-procrastination systems (research-grade)

- **Implementation intentions** (Gollwitzer & Sheeran 2006, $d=0.65$, 94 studies): DSpace
"If it is 9:00 AM Monday-to-Friday, then I sit at my desk and open Instantly and send the

first email before I do anything else.” Write each one. Post on the desk.

- **Temptation bundling** (Milkman, Wharton): you can only listen to your favorite podcast while doing cold outreach. The dopamine of the reward fuses with the work cue.
- **Commitment devices**: \$50 in a stranger’s hands every Sunday, returned only on proof of the week’s outreach numbers. Public commitment on X/Twitter or in a Skool community.
- **Smallest viable action (BJ Fogg, Stanford Behavior Design Lab)**: on bad days, the rule is *open Instantly and send one email*. That’s it. Fogg’s research-backed insight from *Tiny Habits*: “You change best by feeling good, not by feeling bad... you use feelings of success, not guilt, shame, or fear, to wire in a habit.”

Maria Shriver

Weekly schedule template

	Mon	Tue	Wed	Thu	Fri	Sat	Sun
6:00–7:15	Morning protocol (§2)	same	same	same	same	same, lighter	Reset (§1 weekly work)
7:15–8:00	Spanish (Pimsleur)	Spanish	Spanish	Spanish	Spanish	Off	Off
8:00–12:00	OUTREACH BLOCK — 80 emails, 20 LinkedIn DMs, 30 IG/X DMs	Same	Same + 5 follow-up calls	Same	Same	Off	Plan week
12:00–13:00	Lunch + walk outside						
13:00–17:00	CALL BLOCK — booked discovery & sales calls; if none, AI build practice	Same	Same	Same	Same	Off	Off
17:00–17:30	Tomorrow setup ritual						

17:30– 19:30	Gym + Spanish review						
19:30– 21:30	Skill building (AI tools, sales recordings review)						
21:30– 22:15	Night protocol (§2)						

5. INCOME STRATEGY LAYER (the section that matters most)

You are a salesperson learning AI. That is one of the highest-leverage skill stacks for 2026. Three paths follow, in priority order.

PATH A — Accelerate from appointment setter to high-ticket closer

Priority path. Fastest to \$10K. Lowest tool cost.

Why this is the fastest path for you: the offer already exists, the leads already exist, the sales process already exists. You just need to graduate seats. Industry benchmarks (Bravado, RepSelect, Indeed, Dial-A-Closer) for remote high-ticket sales in 2025–2026:

- Setter income (rampup → mid): \$1,500–\$3,000 → \$4,000–\$7,000/month
- Closer income (rampup → mid → top): \$5,000–\$10,000 → \$10,000–\$30,000/month
- Commission: 10–20% per close; \$5K ticket × 15% = \$750/close; 14 closes/mo = \$10,500
- Sales operator Tiye Martin (LinkedIn, March 2025): *“I’ve seen setters making 20k/m and closers making 6”* [LinkedIn](#) — the offer matters more than the seat

90-day execution path:

1. **Weeks 1–4 (still setting):** Crush your current setter quota. Become the top setter on the team. Record yourself daily. Listen to your three best and three worst calls per week.
2. **Week 2–onward:** Ask your current company to let you shadow closers’ calls. Do mock closes nightly. Use Cerra-style training (Adam Cerra’s Cerra Closer Academy — most teach you to “think faster on your feet,” not just rapport). [Adam Cerra](#)

3. **Weeks 5–8:** Apply for closer seats. Top job platforms in 2025–2026: Bravado.co War Room, RepSelect.io, Glassdoor, Indeed remote, Dial-A-Closer, LinkedIn (search “high-ticket closer remote”). Apply to 10/day. Target offers in the \$5K–\$20K ticket range in coaching/consulting/B2B services.
4. **Weeks 9–12:** Get on at least one closer offer. Even at “average” 8–10 closes/month at 10–15% commission on a \$5K offer, that’s \$4,000–\$7,500/month closer pay *on top of* any residual setter income.

\$10K/month structurally: 1 closer seat with quality inbound leads, 4–6 calls/day, 8–14 closes/month at \$5K avg ticket and 15% commission. Standard. Documented across many Glassdoor / Bravado threads.

Communities to join today (free or cheap): Bravado War Room (free, gated), RepSelect (free profile), Adam Cerra’s email list (free), Dan Henry / Cole Gordon YouTube (free).

PATH B — AI-powered service business (sales + AI together)

Secondary path. Slower to \$10K but builds equity. Run alongside Path A.

This is the path where your two skills compound. You are uniquely positioned: most AI agency builders cannot sell; most salespeople cannot build. You can do both at a beginner level.

The four sub-niches with verified pricing (2025–2026 data):

Niche	Build cost	Client retainer	Time to first client
AI voice agents (Vapi/Retell/Bland) for dental, med-spa, HVAC	\$0.10–\$0.20/min platform YESWorkflow	\$1,000–\$5,000/mo OR \$0.50–\$2.00/min (yesworkflow.com, 2026) YESWorkflow	30–60 days
AI chatbots for local SMBs	\$500–\$1,500 setup	\$199–\$2,500/mo (chipp.ai). Bizwhat Aibusiness.vc documented case: “A developer in Tampa earns \$15,000/month from six dental practices. Each practice pays \$2,500/month for an AI chatbot that handles appointment scheduling, insurance verification questions, and after-hours patient inquiries.” AI Business	30–60 days

n8n/Make.com workflow automation	Tool cost <\$50/mo	\$2,500–\$8,200/mo per Maker School student averages (udcourse.com). Udcourse Apify case study verified Nick Saraev's 1SecondCopy at \$90K/mo MRR powered by Apify scraping + Make.com pipelines Apify (blog.apify.com).	45 days per Maker School's "Marcus Chen" case Udcourse
GoHighLevel SaaS reseller (your own white-labeled CRM)	\$97–\$497/mo to GHL	\$297–\$497/mo per client. netpartners.marketing documented case: "Agency B: Local agency selling websites. Shifted to SaaS Mode, packaging a snapshot for gyms at \$297/month. Signed 80 gyms in a year. \$23K+/month recurring." Netpartners	60–90 days

The \$0-budget launch sequence (synthesized from Liam Ottley's public X thread + Nick Saraev's documented playbook):

- **Day 0:** Buy 2–5 domains from GoDaddy (~\$12 ea), set up Google Workspace (\$6/user/mo) with 3 email accounts each. Connect to Instantly (~\$37/mo) and start warming. From Ottley's thread: "Step 0: Purchase 2-5 domains from GoDaddy, create Google Workspace for each w/ 3 email accounts each, connect to Instantly then start warming them up. They take 3 weeks to be ready to send so this should be the first thing you do." [X](#)
- **Days 1–7:** Pick a niche. Use Hormozi's \$100M Offers criteria (Ottley explicitly recommends this in step 3 of his beginner playbook): massive pain + purchasing power + easy to target + growing. [The Process Hacker](#) For your profile, recommended: **dental offices, med spas, real estate brokerages, or roofing companies** — high pain, \$2K–\$5K/mo retainers are normal, easy Apollo/LinkedIn targeting.
- **Days 7–21:** Build ONE deliverable in your chosen niche for FREE for someone you know (Ottley's documented playbook example: "Lead Source: Family (my uncle). Industry: Local Plumbing. Timeline: 4 days. Simple ChatGPT-powered chatbot that answers FAQs about plumbing services and collects customer details for quotes. Results: Saved about 30 mins per day answering repeat questions"). [Scribd](#) Get testimonial.
- **Days 21+:** Begin cold outreach at scale. 20–30 emails/day from each warmed inbox via Instantly + 10 LinkedIn/IG DMs/day. **Realistic benchmarks:** per LevelUp Leads' analysis of Smartlead's 14.3B-email dataset (Jan 2021–Apr 2025), the cross-industry average is ~3 replies per 100 cold emails sent; Instantly's platform-wide 2025 benchmark across

billions of interactions is 3.43% average reply with top performers exceeding 10%.

Martal Group Math at top-quartile execution: 100 emails/day × 7% reply = 7 replies/day × 15% meeting = ~1 meeting/day × 25% close = ~1 client/week after the 4–6 week ramp.

\$10K/month structurally on Path B: **4 clients × \$2,500/mo retainer** (chatbot or voice agent), OR **6 clients × \$1,500/mo**, OR **20 GHL SaaS clients × \$497**.

Communities to join today (verified pricing):

- **Free:** Liam Ottley's "AI Automation Agency Hub" on Skool — independently verified at 311,500+ members as of April 23, 2026 (AIFunnelInsider review); **AI Funnel Insider** CommunityHunter's February 2026 review ranks it #5 on Skool's Discovery page overall. **CommunityHunter** Weekly Q&As, 60+ hours of training, 50+ templates (skool.com/learn-ai). **AI Funnel Insider**
- **Free:** Liam Ottley's YouTube (~706K subs) — start with his "AI Automation Agency Complete Guide." **Automation Atlas**
- **Free:** Nick Saraev's YouTube (~313K subs, official "n8n Creator"). **CommunityHunter**
- **\$99/mo:** "AI Automation Society" Skool community.
- **\$184/mo (rising to \$204):** Nick Saraev's Maker School — most expensive on Skool **CommunityHunter** but the most operator-grade.
- **\$5K–\$7K:** Liam Ottley's paid AAA Accelerator **Marksinsights** — *do not buy until Path A is producing income.*

PATH C — Sales consulting / training (using AI tools)

Year-2 endgame. Do not start before you have personal numbers to point to.

You teach what you have done. Until you have done \$10K/month at least three times, you should not sell sales training to others. Once you have, the path opens:

- **AI-augmented sales coaching for SMB sales teams:** \$5,000–\$15,000/month retainers **Stack** per stack.expert pricing data.
- **6-week AI capability programs for sales teams:** \$20,000–\$50,000 **Stack** (stack.expert).
- **Half-day workshops:** \$5,000–\$10,000 per session **Aitomake** (aitomake.com).
- **1:1 sales coaching with AI tooling layer:** \$300–\$600/hr **Alessentials** as a specialist consultant.

Productized version: Skool community at \$97–\$297/mo with you teaching "Sales + AI" —

once you have a case-study reel, this is the highest-margin business of the three.

Honest realism caveats

- Most of Liam Ottley's "\$10K–\$50K/month for beginners" framing is marketing. Independent reviews (marksinsights.com, ippei.com) Marksinsights note typical student outcomes are well below promo numbers; most quit before month 6. Marksinsights
 - The AAA chatbot model has commoditized in 2024–2025; Ottley himself pivoted his own brand toward higher-ticket consulting in 2024. Marksinsights
 - The Apify-verified Nick Saraev figure (\$90K/mo on 1SecondCopy) is among the few independently confirmed datapoints in this space.
 - Path A (remote closing) is the most predictable income path because the offer, leads, and infrastructure already exist. You are taking a job, not building a company. That's the right move at \$0.
-

6. ENVIRONMENT & LIFESTYLE DESIGN

Physical environment now (wherever you currently live)

- **Desk faces a window** — Huberman's protocol: natural light in your peripheral vision sustains alertness.
- **Bright overhead lights on until ~3 PM**, then dimmed — Huberman's daylight curve (Huberman Lab newsletter, "Using Light for Health").
- **One screen, one purpose.** No personal browsing on the work computer.
- **A printed dashboard** above the monitor: emails sent this week, calls booked, deals closed, \$ toward Medellín fund.
- **A "no phone after 9:30 PM" enforcement mechanism:** phone charges in another room. Buy a \$10 alarm clock.
- **A clean kitchen with two simple meals you rotate** — decision fatigue around food is a leak.

Mentally inhabiting Medellín before you arrive

This is where Reality Transurfing's "internal state shifts outcomes" gets a scientifically grounded operationalization:

- **Live partially on Colombian time.** Start learning Spanish daily (Pimsleur 30 min/day for

90 days produces functional A2). Watch one Colombian YouTuber per day.

- **Visit Medellín virtually:** Google Street View walk Provenza, Lleras Park, El Tesoro. Watch El Poblado apartment tours on YouTube. Look at real Fincaraiz or Metrocuadrado listings weekly — print the one you want.
- **Open a savings sub-account called “Medellín Move”.** Funded weekly. Targets: \$3,000 for relocation; \$7,600 USD cash for a 2025 KTM 390 Duke G3 at COP \$30,990,000 (KTM Llanogrande official dealer listing, [Tucarro](https://www.tucarro.com.co) [tucarro.com.co](https://www.tucarro.com.co)), or finance up to 90% per multiple Colombian dealers; [Tucarro](https://www.tucarro.com.co) \$2,500 first-and-last on a \$1,000/mo El Poblado one-bedroom.
- **Join one Medellín digital nomad Slack/Discord** today. By month 4 you will know people there.

Digital environment

Wood & Rünger’s research again: your environment is your default behavior. Apply it to information:

- **Unfollow every account that makes you feel behind, jealous, or activated.** No exceptions for “but I learn from them.” If your nervous system spikes, the cost > learning.
- **Follow operators who post their numbers, not their cars:** Nick Saraev, Sam Parr, Daniel Priestley, Greg Isenberg, Liam Ottley (filter for tactical posts only), Codie Sanchez, Justin Welsh, Alex Hormozi.
- **One reading-only window per day** for X/LinkedIn (30 min), outside outreach blocks.
- **Curated podcast list:** Huberman Lab, My First Million, The Diary of a CEO, The Game (Hormozi), Modern Wisdom, Nick Saraev’s channel.

7. RELATIONSHIP COMPONENT

You explicitly want a healthy romantic relationship. The research-honest answer: this is downstream of (a) secure-attachment behaviors (developable) and (b) self-worth (built primarily through kept self-promises, not external validation).

What attachment theory actually says

Adult attachment styles are not destinies. Mikulincer & Shaver (2007) and follow-on research establish **earned secure attachment** as real: people develop it through consistent

secure relationships (romantic, therapeutic, or friendship) and through practiced behaviors. The behaviors of secure attachment, summarized from the empirical literature:

- Direct, non-defensive expression of needs ("I felt anxious when you didn't reply for a day; I'd like to understand what was happening").
- Tolerance of partner's independence without interpreting it as rejection.
- Repair after rupture (apologize specifically, reconnect physically/verbally, return to baseline within hours not days).
- Emotional regulation under stress (you can be activated without becoming aggressive or withdrawing).
- Curiosity about the partner's inner world over time.

The link between income confidence, self-worth, and attraction

The honest mechanism: **people who keep promises to themselves develop a calm, non-needy stance with others.** This is not "you need money to find a partner" — it is "the same daily consistency that produces income produces self-trust, and self-trust is the strongest attractor." Conversely, performing dating from a place of \$0 and inconsistency tends to produce anxious-attachment dynamics, scarcity behavior, and low-tier matches.

Practical weekly actions while you're building your life

- **One social meet per week, minimum**, outside your home. Coffee meetup, language exchange, or gym class. Cold approach is optional; *presence* is not.
- **One vulnerable conversation per week** with someone (friend, sibling, therapist if accessible). Articulating internal states out loud is one of the most underused regulation skills.
- **Therapy, if affordable**, with someone trained in EFT (emotionally focused therapy) or AEDP. If not affordable, *Attached* (Levine & Heller) is the cleanest non-clinical introduction; *Wired for Love* (Stan Tatkin) is more applied.
- **In Medellín**, the dating ecosystem is unusually rich for an English-speaking man with income and Spanish — but the same patterns produce the same outcomes. Solve the internal work first. The geography doesn't.
- **Boundary on dating apps**: maximum 3 hours per week total.

8. THE 6-MONTH ROADMAP WITH SPECIFIC MILESTONES

DAYS 1–30: FOUNDATION

Income (Path A primary, Path B prep):

- Crush current setter quota. Become top-3 on team by week 3.
- Day 0: Buy 3 domains + Google Workspace + Instantly subscription. Start warming (Ottley's mandatory 3-week prerequisite).
- Week 2: Begin shadowing closers, record mock closes nightly.
- Week 3: Start applying to closer seats on Bravado, RepSelect, Indeed, Glassdoor — 10/day.
- Week 4: First closer-seat interviews.

Identity & habits:

- Morning protocol locked in by day 7. Use the BJ Fogg "smallest viable action" rule on bad days.
- Two-column thought records daily.
- Sunday self-affirmation values writing (Cohen & Sherman protocol).

Income milestone: Active setter commission flowing. Minimum \$1,500–\$3,000 setter income. Closer-seat interviews lined up.

Lifestyle: Spanish 30 min/day, Medellín Move account open, \$0 ➔ at least \$500 saved.

MONTHS 2–3: MOMENTUM

Income (transition to Path A primary, Path B parallel):

- Month 2: Land closer seat. First commissions. Begin Path B with free-build for warm contact (Ottley's playbook).
- Month 3: 4–8 closes/month. Begin paid Path B outreach using warmed inboxes. Aim for first free testimonial in week 9.

Habit consolidation:

- Morning routine should now be automatic. Realistic timing: Lally, van Jaarsveld, Potts & Wardle, "How are habits formed: Modelling habit formation in the real world," *European Journal of Social Psychology* 40(6):998–1009, 2010 — the often-cited "66 days" was the *median* across an 18–254 day range (96 participants, 82 providing usable data).

Wiley Online Library

Translation: do not panic if some habits take three to four months to feel automatic.

- Add deliberate practice on sales tonality (Ericsson framework): 30 min/day reviewing recorded calls.

Skill acceleration:

- Pick ONE AI niche from Path B (recommend: AI voice agents OR Make.com automations). Spend 1 hour/night in Liam Ottley's free Skool community + Nick Saraev's YouTube.
- Build 2 demo systems in your chosen niche.

Income milestone: \$5,000–\$8,000/month from closing + \$0–\$500 from Path B. Total: \$5K–\$8K/mo.

Lifestyle: Spanish ~A2. Medellín Move account \$2,000–\$4,000.

MONTHS 4–6: SCALING

Income to \$10K:

- Month 4: 8–14 closes/month on Path A consistently. Path B: first paid client at \$1,500–\$2,500/mo retainer.
- Month 5: Stabilize \$8K–\$12K/mo Path A. Path B: 2–3 clients at \$1,500–\$2,500/mo each.
- Month 6: Either pure-Path-A \$10K–\$15K, or hybrid Path A + 4 Path B clients at \$2,500 = \$10K combined. **Hit \$10K/month at least once.**

Lifestyle upgrade:

- Book Medellín scouting trip in month 5 (1 week, \$1,000–\$1,500 all-in).
- Sign 6-month furnished lease in El Poblado or Laureles via Fincaraiz or colombiamove.com. Mid-tier El Poblado one-bedroom: \$700–\$1,200/mo per multiple 2025–2026 sources (Two Travel, ColombiaMove).
- Move in month 6 or month 7.
- KTM 390 Duke G3 financed in Colombia (90% LTV available per dealer listings) once you've been in-country and have local banking; cash purchase ~\$7,600 USD.

Relationship building:

- By month 4, you should have one consistent in-person social practice (gym, salsa class, run club, founder meetup) producing weekly contact with potential partners and friends.
- Once in Medellín, weekly social activities + Spanish exchanges produce a strong organic dating funnel. Avoid app-only dating.

Income milestone: \$10,000 in a single calendar month, by end of month 6 at latest.

BONUS SECTION

Top 10 books (with reason)

1. **Atomic Habits — James Clear.** The cleanest practical synthesis of identity-based habits + the four laws.
2. **Tiny Habits — BJ Fogg.** The “smallest viable action” + emotion-anchored habit installation. Use this on your worst days.
3. **Good Habits, Bad Habits — Wendy Wood.** The deepest research on context cues and why willpower fails.
4. **\$100M Offers — Alex Hormozi.** The offer-construction framework Liam Ottley explicitly recommends in his beginner playbook.
5. **\$100M Leads — Alex Hormozi.** Hormozi's documented lead-gen framework. Apply directly to Path B outreach.
6. **The Psychology of Money — Morgan Housel.** Behavioral framing of wealth; the antidote to scarcity-driven financial decisions.
7. **Deep Work — Cal Newport.** Concentration as a skill. Your outreach blocks live here.
8. **Attached — Amir Levine & Rachel Heller.** Adult attachment theory, accessible version. For the relationship goal.
9. **The Mountain Is You — Brianna Wiest.** Self-sabotage frame. Useful for the consistency problem.
10. **Mindset — Carol Dweck.** Growth-mindset research at the source. Pair with Clear.

Top thinkers/mentors to follow (with platforms)

- **Andrew Huberman** (Huberman Lab podcast, hubermanlab.com newsletter) — neuroscience protocols.
- **James Clear** (jamesclear.com 3-2-1 newsletter) — weekly habit research distilled.
- **BJ Fogg** (Stanford Behavior Design Lab, tinyhabits.com) — Tiny Habits protocol.
- **Alex Hormozi** (YouTube, The Game podcast, Acquisition.com) — operational frameworks for service businesses.

- **Liam Ottley** (YouTube + free Skool “AI Automation Agency Hub”) — AAA model, despite marketing flavor.
- **Nick Saraev** (YouTube + Maker School at \$184/mo) — n8n/Make.com automation, more credible operator.
- **Codie Sanchez** (Contrarian Thinking) — small business acquisition lens.
- **Daniel Priestley** (YouTube + Key Person of Influence) — productizing expertise.
- **Greg Isenberg** (Startup Empire \$2,999/yr, free X content) — modern solo/indie business frames.
- **Justin Welsh** (The Saturday Solopreneur newsletter, free) — solo business systematization.

Key concepts worth deep study

- **Identity-based habits** (Clear; Bem self-perception theory, 1972)
- **Behavior Design / Tiny Habits / Fogg Behavior Model** ($B = MAP$)
- **Implementation intentions** (Gollwitzer & Sheeran 2006 if-then plans, $d=0.65$)
- **Cognitive restructuring** (Beck; downward arrow technique)
- **Self-affirmation theory** (Cohen & Sherman 2014; Steele 1988)
- **Predictive coding / Bayesian brain** (Clark, Friston — for the real version of “you see what you expect”)
- **Salience network vs. RAS** (the actual neuroscience of attention)
- **Attachment theory and earned secure attachment** (Bowlby, Ainsworth, Mikulincer & Shaver 2007)
- **Deliberate practice** (Anders Ericsson) — applied to sales calls specifically
- **Value equation** (Hormozi: $\text{dream outcome} \times \text{perceived likelihood} / \text{time delay} \times \text{effort}$)

RECOMMENDATIONS (staged, with benchmarks)

Right now (today)

1. **Resolve the \$0 runway risk first.** If you have less than 60 days of survival cash, do not buy any tools or courses. Apply to 5 closer seats today. The fastest path to a check is

graduating to closer on someone else's offer.

2. **Lock the morning protocol** (§2). This is the only "habit" worth installing in week 1. Everything else depends on it.
3. **Pick ONE Path B niche** by the end of week 2 (recommend: AI voice agents OR Make.com automations) — no switching for at least 90 days.

Switch the priority order if any of these triggers:

- *No closer seat by end of month 2* → Path B becomes primary, Path A becomes "any setter income."
- *Path A producing \$7K+/mo by end of month 3* → consider deprioritizing Path B until you have 60 days of runway, then resume.
- *Both producing income by month 4* → start building Path C content (X/LinkedIn posts about your numbers, 4x/week).

Stop these immediately

- Watching motivational YouTube (it suppresses action via the intention-action gap).
- Buying any course over \$500 before you have personal sales numbers.
- Dating apps as primary social investment.
- Working from your bed.

CAVEATS

1. **Income projections are conditional on consistent execution.** \$10K/month in 6 months is realistic but not typical. The plan assumes 5–10% reply rates (top-quartile per Instantly 2025 benchmark; cross-industry average per the Smartlead 14.3B-email analysis is ~3%) and 20–30% close rates — your numbers will be lower at first.
2. **Some sources used in income research are self-promotional.** I've flagged where claims (Liam Ottley's student wins, Daniel Fazio's \$800K/mo) Marksinsights are self-reported vs. third-party verified (the Apify-confirmed Nick Saraev numbers and the netpartners.marketing GHL agency cases are among the few independently sourced datapoints).
3. **The Medellín relocation has tax, visa, and banking complexities** not covered here. Colombia has a "digital nomad" visa (Visa V) as of 2022; consult an immigration attorney

before moving — do not just fly in on a 90-day tourist stamp and overstay.

4. **Reality Transurfing's mechanisms (attention, identity, expectancy) are real; its quantum mysticism is not.** The plan extracts the working parts and leaves the rest. If you find the pseudoscientific framing motivating as poetry, that's fine — just don't make decisions based on "the space of variations."
5. **The relationship section is intentionally short.** No 6-month plan can build a healthy partnership; it can only build the conditions. Be patient with that timeline.
6. **Cold exposure, fasting, and other Huberman protocols have contraindications.** If you have cardiovascular issues, eating-disorder history, or are on medications, consult a doctor. Sunlight + a regular sleep schedule + cold *showers* (not plunges) is the conservative baseline.
7. **The conversion math assumes warmed inboxes and Apollo/Apify-sourced quality leads.** Cold sending from a brand-new domain will get you blacklisted in 3 days. Respect the 3-week warmup window.
8. **Habit formation timelines vary widely.** Lally et al. 2010 found a range of 18–254 days for habit automaticity, [Wiley Online Library](#) not a fixed 21- or 66-day rule. Plan for three to four months on the harder habits and stop using rigid timelines as a self-flagellation tool.

The plan above is dense by design. Print it. Mark it up. Execute the first 30 days. Then revisit.
